SAFE-SLEEVE

Our standard type textile SAFE-SLEEVE is produced from **polypropylene** which is very hard-wearing and recyclable.

Polypropylene endures acids and alkali well.

SAFE-SLEEVES

- protect people near-by a breaking hose
- protect hydraulic hoses from abrasion
- offer an economical and safe choice for hose protection
- material fully recyclable
- tolerate both freeze and heat

SAFE-SLEEVE protects people near-by a breaking hose (is pin hole-approved). European standard EN ISO 3457 states that hydraulic hoses must be protected in following cases:

- operating pressure exceeds 5 MPa (=50 bar) or
- temperature exceeds 60°C and
- the hoses are in common operating place within 1 meter range from the operator and in case of hose breakage the direct fluid spray may reach the operator

In addition, the protectors must be strong enough to stop, spread or turn the fluid from directly hitting the operator once the hose breaks. Standards

EN 12999 and EN 4413 also contain protection demands for hose assemblies. Our Safe-Sleeve fulfills these demands!

It is recommended to choose a size which is a few millimeters larger than the hose to improve protection and make mounting easier. Whether there is a coupling already installed also affects the eligible size. Please see our recommendations.

Abrasion resistance of SAFE-SLEEVE is excellent (tested to standard SFS-EN ISO 12947-3: minimal mass loss). This makes it a very good hose protector, as well. The recommended temperature range is from -40°C to +80°C. SAFE-SLEEVE is UV-protected (lasts at least 120 kLy) and according to UV-aging tests the UV-ageing did not have a significant effect on the tensile properties or the colour of the Safe-sleeve. SAFE-SLEEVE has low conductivity of electricity

Colour

Black, no printing.

Length

50m / roll.

Aluminium rings for attaching the Safe-Sleeve on the hose also available!

PRODUCT CODE	INNER DIAMETER (mm) (TOLERANCE +/- 0.5MM)	FLAT (mm)

SAFE-SLEEVE MSHA

Easy-to-install, textile SAFE-SLEEVE with MSHA-acceptance is produced from polyester which is recyclable material. In addition to hoses, SAFE-SLEEVE MSHA protects people near-by a breaking hose and meets the requirements of standards EN 12999 and EN ISO 3457.

These demands are explained under the standard Safe-Sleeve. The recommended temperature range is from -40°C to +120°C. SAFE-SLEEVE MSHA is UV-resistant and has low conductivity of electricity. Abrasion resistance of SAFE-SLEEVE MSHA is also good.

Test reports are available on request. As a guideline we suggest that the Safe-Sleeve is a few millimetres larger than the hose. Please see our recommendations.

Colour

Colour black with white printing.
Own printing possible – ask for details.

Length

50m / roll.
Aluminium rings for attaching the Safe-Sleeve on the hose also available.

SAFE-SLEEVE MSHA

SAFE-WRAP is produced from 100 % polyamide with PU coating and Velcro® -brand fasteners which make it very easy to install on hose lines afterwards and repeatedly. Fast installation makes Safe-Wrap a very cost-effective solution for hose protection. It is also widely used to bundle long and heavy hose bundles together with Safe-Strips.

Its tensile strength is excellent (EN ISO 13934-1) and water repellence of the fabric is 100% (EN 24920).

Operating temperature is from -20°C to + 120°C degrees. Safe-Wrap fulfills the demand of standard ISO 3457 (is pin hole-test approved) and is also very resistant to abrasion. This product is available in standard sizes (inner diameters): 40mm, 60mm, 80mm, 100mm and 120mm

Other diameters (Ø 20mm to 400mm, in 5mm intervals) are available on request.

Lengths: standard rolls 10m or 25m.

Other roll lengths up to 50m and fixed lengths are produced after order.
